John Nelson, (630) 541-1540
(Name and telephone number, including area code, of the person to contact in connection with this report)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

- Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2025.
- Rule 13q-1 under the Securities Exchange Act (17 CFR 240.13q-1) for the fiscal year ended .
-

Item 1.01 Conflict Minerals Disclosure and Report

Dover Corporation is unable at this time to determine whether any of the tin, tantalum, tungsten or gold (the "Conflict Minerals") used in its products may have originated in the Democratic Republic of the Congo or adjoining countries in circumstances that support armed groups in the region.

Item 1.02 Exhibit

A Conflict Minerals Report is submitted as an Exhibit to this Report and is available at the following internet website: <https://www.dovercorporation.com/about-us/our-governance/conflict-minerals>. The contents of any website referred to in this Form SD or the Conflict Minerals Report are not part of, nor incorporated by reference into, this Form SD or the Conflict Minerals Report.

**Dover Corporation
Conflict Minerals Report
For the Year Ended December 31, 2025**

The Company has made statements in this Conflict Minerals Report that may constitute forward-looking statements about its plans to take additional actions or to implement additional policies or procedures with respect to its "reasonable country of origin inquiry" and due diligence to determine the origin of Conflict Minerals included in the Company products. The Company undertakes no obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise. The Company's reporting obligations under the Dodd-Frank Act may change in the future, and its ability to implement certain processes may differ materially from those anticipated or implied in this report. Additionally, the Company relies on its direct material suppliers, which may be many steps removed from smelters or refiners of Conflict Minerals in supply chains, for information required to meet its reporting obligations. There can be no assurance that the information received from its direct suppliers will be complete and accurate or that when the Company receives such information, it will be able to make a determination as to whether the products manufactured contain Conflict Minerals originating in certain countries in support of armed groups operating in those countries.

This report for the year ended December 31, 2025 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the "Rule"). The Rule was adopted by the Securities and Exchange Commission (the "SEC") to implement reporting and disclosure requirements related to conflict minerals as directed by Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act"). The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals that are necessary to the functionality or production of their products. "Conflict Minerals" or "3TG" minerals are defined as cassiterite, columbite-tantalite, gold, wolframite and their derivatives, which are limited to tin, tantalum, tungsten and gold.

Based on information received to date, Dover Corporation ("Dover" or the "Company") is unable to conclude whether the Conflict Minerals used in its products may have originated from the Democratic Republic of the Congo (the "DRC") or adjoining countries (collectively, the DRC and adjoining countries are the "Covered Countries") in circumstances that support armed groups in the region.

The information contained in this report is not audited.

The Company conducted a Reasonable Country of Origin Inquiry ("RCOI") concerning Conflict Minerals included in its products.

I. Products

The Company's products include a variety of industrial equipment as outlined below. These products, along with their manufacturing locations, are more fully described on its website, www.DoverCorporation.com. Information contained on the Company's website or otherwise actively linked to this report is not part of, nor incorporated by reference into, this report or the Company's Form SD.

Engineered Products. Products in the Company's Engineered Products segment include electronic components that incorporate tantalum, tin and gold. Other product lines incorporate tungsten and tantalum where required for durability or strength.

Clean Energy & Fueling. Products in the Company's Clean Energy & Fueling segment include electronic components and measuring device components that incorporate tantalum, tin and gold. Other product lines incorporate tungsten and tantalum where required for durability or strength.

Imaging & Identification. Products in the Company's Imaging & Identification segment include electronic components that incorporate tantalum, tin and gold. Other product lines incorporate tungsten and tantalum where required for durability or strength.

Pumps & Process Solutions. Products in the Company's Pumps & Process Solutions segment include electronic components and measuring device components that incorporate tantalum, tin and gold. Product lines incorporate tungsten and tantalum, as in the pump product lines, where required for durability.

Climate & Sustainability Technologies. Products manufactured in the Company's Climate & Sustainability Technologies segment include electronic components that incorporate tantalum, tin and gold. Lighting in the refrigeration may include tungsten. Other industrial product lines may include tantalum and tungsten where required for durability.

II. Policy

The Company has adopted a "conflict free" supply chain policy. The policy has been communicated to suppliers through the Company's Supplier Code of Conduct, the Conflict Minerals survey process and through its efforts to implement related terms and conditions in supplier contracts. Dover suppliers are required to comply with Dover's Supplier Code of Conduct, which includes requirements relating to Conflict Minerals and responsible sourcing. Relevant suppliers are responsible for passing these same requirements on to their suppliers. We expect our suppliers to implement a process to reasonably assure that the Conflict Minerals contained in the products provided to Dover do not perpetrate human rights abuses in the DRC or an adjoining country.

The Company's Conflict Minerals Policy is available on the Company's website at: <https://www.dovercorporation.com/about-us/our-governance/conflict-minerals>

III. Design of the Due Diligence Process

The Company has undertaken to identify and assess the conflict mineral risk in its supply chain in accordance with *The Organization for Economic Co-operation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High Risk Areas*, including the *Supplement on Tin, Tantalum and Tungsten*, and the *Supplement on Gold* (the "OECD Guidance") and in accordance with the requirements of the Dodd-Frank Act. The Company's activities are described in the five steps outlined in that OECD Guidance and in the Responsible Minerals Initiative's (formerly the Conflict Free Sourcing Initiative) *Five Practical Steps for Conflict Minerals Due Diligence and SEC Disclosure*.

Step 1. Establish Strong Company Management Systems

The Company has appointed senior executives and members of its accounting and legal departments to oversee the Conflict Minerals reporting and compliance processes. To manage the day-to-day administration of the RCOI process, the Company appointed a separate Conflict Minerals team. That team follows standards set forth in the OECD Guidance, using a third-party provider's survey tool and database functionality that allowed it to receive, review and report on the results of its survey process. The Company has implemented a process to retain the information obtained through the survey tool for a period of not less than five years. The Company has not undertaken an audit of its processes, as permitted by guidance issued by the U.S. Securities and Exchange Commission. The third party provider was selected based on its experience, access to shared supplier databases and technical solutions to assist in the Conflict Minerals survey process, and has continued to work with the Company for the 2025 report. Information obtained through the third party provider's survey tool will also be retained for five years, in accordance with the Company's policy.

The Company's Conflict Minerals reporting program aligns with the OECD Due Diligence Guidance and the requirements of the Dodd-Frank Act.

Step 2. Identify and Assess Risks in the Supply Chain

The Conflict Minerals team engaged with operating company supply chain, operations and engineering personnel to determine the applicable categories of purchasing activity and to identify parts, materials and components which its operating companies reasonably expected may contain Conflict Minerals or where mineral content is unknown.

Based on data collected over prior years, the Company has been able to refine its process of identifying a list of suppliers to survey where the purchased items were directly incorporated into the Company's

products. Suppliers of indirect materials, consulting fees, and capital project costs, for example, were not included in the surveys. By following this approach, the Company was able to concentrate its 2025 survey efforts on relevant suppliers, including those with the potentially highest risk on the Company's operating companies, based on the largest spend within the Company's supply chain. The Company was also able to leverage its third-party survey provider's expertise and access to supplier surveys for other clients to obtain information from more suppliers who were potentially in scope for products that included Conflict Minerals, and help identify risks within the Company's supply chains.

In 2025, the Company has issued surveys to 573 suppliers of parts, materials and components that potentially include Conflict Minerals based on classifications in the Company's spend management system and information available through supply chain and engineering personnel. The Company's third-party provider and its operating companies followed up on survey responses that included discrepancies or did not address the survey questions or where information provided by suppliers indicated potential sources within the Covered Countries.

In the 2025 survey responses, suppliers were asked to identify smelters located in the Covered Countries that might be the source of 3TG minerals included in products purchased by the Company. In some cases, suppliers were unable to identify the smelters or countries of origin in their supply chain. Many suppliers responded to the survey at the company level, by providing information related to all of the items the supplier produces, without identifying smelters specific to the items purchased by the Company. A large number of the Company's suppliers remain several steps removed from the ultimate smelter, or are unable to identify smelters specific to the products purchased by the Company, because of the number of lower level suppliers with incomplete information about their own sources. In responses received, 102 suppliers identified tin, 83 identified tantalum, 71 identified tungsten, and 82 identified gold smelters as being located in the Covered Countries. Using the smelter information provided by suppliers, the third-party survey provider reviewed the smelter information provided to determine if the smelters were included in the RBA Conformant Smelter or supplier identification list (the "RBA List") and other published smelter information and reported findings to the Company.

The Company is aware that some of the smelters with identification numbers from the Responsible Business Alliance ("RBA") have not completed the RBA audit process or periodic reaudit or recertification processes. Smelters identified on an RBA active list have committed to participate in a certification program with respect to the sources of their raw materials. Smelters on the active list are at various stages of the audit cycle, which may include post-audit corrective actions. RBA has indicated that the time it takes a smelter to complete an audit cycle varies.

The Company has identified 749 smelters that align with RBA List numbers based on the information provided by its suppliers for the current year. Because of the functionality of the survey tool in use, there are additional "smelter" names provided by suppliers that could not be tied to or verified to the RBA List when reviewed by the third party survey company. The information provided for these non-RBA entities is not adequate for the Company to verify that the identified entities are, in fact, smelters.

A number of suppliers have indicated that the Conflict Minerals included in their products come from recycled sources, but generally could not certify that all of the Conflict Minerals used come from recycled sources. The Company relies on its suppliers to conduct the intermediate due diligence of second, third or lower level suppliers, and based on the responses from suppliers in its inquiry, suppliers have not received sufficient information to be able to complete those inquiries to date.

Step 3. Design and Implement a Strategy to Respond to Identified Risks

The Company's management is briefed on the status of due diligence efforts. The Company's Conflict Minerals Policy has been distributed to the operating companies in each of the Company's five business segments and is incorporated into contracts and purchase orders placed by those operating companies. The Company has developed a risk management plan that outlines the Company's response to any identified risks related to sourcing of materials from the Covered Countries, although the Company is currently not aware of any circumstance where it has been necessary to consider implementing those risk mitigation efforts and has not suspended trade or disengaged from a supplier. Where suppliers have not been able to provide information on smelters, the Company may have a risk that the smelters used by such suppliers are not compliant with its policy.

Step 4. Carry Out an Independent Third-Party Audit of Smelter's or Refiner's Due Diligence Practices

The Company currently does not engage in independent auditing of smelters or refiners identified in its supply chain. The Company is a member of the Responsible Minerals Initiative ("RMI") and supports the auditing efforts of that organization through its financial support.

Step 5. Report Annually on Supply Chain Due Diligence

This Conflict Minerals Report constitutes our annual report on the Conflict Minerals due diligence of the Company. A copy of this Conflict Minerals Report is available on the Dover Corporation website at <https://www.dovercorporation.com/about-us/our-governance/conflict-minerals>

IV. Results of the Company's Due Diligence to Date¹

Dover's survey methodology has been developed and refined since the origination of the Dodd-Frank requirement and continuing through March 31, 2026. The original survey format used was updated as changes were made in the recommended RMI format. The Company has retained the services of a nationally recognized third-party provider with expertise in Conflict Minerals solicitations and that also provided a platform to review responses and enhance follow-up on missing or incomplete surveys. That third party was also retained for the 2025 solicitation and reporting. In conducting a "Reasonable Country of Origin Inquiry" for the period from January 1, 2025 through March 31, 2026, the Company reviewed and determined applicability of the RCOI process for suppliers that account for about 52% of its annualized materials related spend for 2025.

The Company received survey responses back from about 80% of the suppliers surveyed. A number of respondents indicated that their products contain Conflict Minerals, but those suppliers cannot yet determine whether those Conflict Minerals originate in the Covered Countries for one or more of the 3TG minerals. Of those suppliers who could not identify any sources, 2 included tin, 2 included tantalum, 7 included tungsten, and 2 suppliers included gold in their products.

Of those respondents that said they had identified all sources of a specific 3TG mineral, a number had identified that their supply chain sources included Covered Country sources. Of those suppliers who had said they had identified all sources for one or more 3TG minerals, including Covered Country sources, in their own supply chains, 100 identified all tin sources, 39 identified all tantalum sources, 37 identified all tungsten sources and 56 had identified all gold sources.

Of the respondents, 243 suppliers indicated that they have developed corrective action plans concerning Conflict Minerals in their products.

Many suppliers responded to the surveys by providing information for Conflict Mineral content and smelters for all products they sell, without distinguishing those contents or smelters applicable to the products purchased by the Company from them. Accordingly, Dover is unable to determine specific smelters or sources that may be included in the products purchased from those suppliers. The Company continues to issue surveys to suppliers and follow-up on the information received in response to surveys.

The Company's suppliers have provided information on smelters in response to the Company's surveys. Because the Company is a number of steps removed from the smelter sources and its suppliers are unable to link any specific smelter to the products and materials provided by those suppliers to the Company, the Company is unable to confirm that any of the smelter names provided are, in fact, sources of Conflict Minerals in the Company's products. Based on these survey responses through March 31, 2026, the Company has identified 749 smelters from the RBA List. Such smelters are included in the list attached as Annex A to this Report. Suppliers have also provided names that the suppliers describe as "smelters" but could not be linked by the Company's consultant to actual smelters on the RBA List and as such, may not, in fact, be smelters. In most cases, this incomplete information provided by suppliers

¹ Supplier responses include surveys issued and answers received by the Company in 2025 and through March 31, 2026. In determining spend, the Company has considered internal information through March 2026, for spend incurred in calendar year 2025, not including any operating company entities which are not currently integrated into the Company's spend database.

consists of partial names and/or locations. The Company believes those incomplete or unmatched names may result in additional sources of the 3TG minerals that are not included in the RBA List. The Company and its third-party survey consultant believe that many of those names likely could be matched to RBA lists, or to non-smelter company names if the Company's suppliers had more complete information from their own supply chain.

Dover is unable to determine where the Conflict Minerals included in its supply chain originate. As a result, Dover is unable to make a determination as to whether the Conflict Minerals included in its supply chain financed or benefited armed groups in the Covered Countries, or came from recycled or scrap sources, or to discern which of the identified facilities (smelters or refiners) process such Conflict Minerals.

Because the Company is several steps removed from smelters and mines, the Company must rely on suppliers in its supply chain to complete their own due diligence on country of origin.

V. Additional Steps of the Company to Mitigate Risks and Improve Due Diligence

The Company, through members of its Conflict Minerals team, participates in industry-wide programs to facilitate sharing of information about smelter programs and conflict-free sourcing, including the RMI, and to review developments in reporting. The Company has also participated in training sessions with its third-party survey provider.

The Company has processes for corrective actions including remediation or termination that may be taken where suppliers identify problematic sources of Conflict Minerals during the survey process. For specific suppliers, corrective actions may depend on factors such as vendor size, risk level, vendor capabilities and the Company's ability to meet quality control requirements associated with customer specifications. To date, the Company has not undertaken remediation with any supplier. Because the Company is a number of steps removed from smelters within its supply chain, lack of information from suppliers on smelters continues to be a risk that the Company seeks to address.

The Company continues to implement Conflict Minerals contract clauses where appropriate for its suppliers. The Company's Supplier Code of Conduct includes Conflict Minerals reporting requirements, and the Company's operating companies are communicating those requirements to the supply chain.

ANNEX A

All Smelter Identification Numbers refer to CFS assigned numbers.
